## Dakar

### Main characteristics and technical advantages of Dakar:

- The width and deep tread reduces the wear and improve traction out of road.
- The small off-roads in the tread improve the handling and the braking capacity.
- The aggressive profile of big blocks placed on the shoulders offer a great mobility in sand, mud, rocks, etc.
- The great hardness and solidity of its structure provide exceptional external aggressions resistance.
- The variable disposition of the off-roads reduces sensitively the noise.
